CORE COMPETENCIES

- ➔ Data Engineering & Integration
- ➔ Metadata-Driven ETL Architecture
- ➔ Data Pipeline Engineering
- ➔ Workflow Orchestration & Automation
- ➔ Enterprise Data Processing
- ➔ Data Quality & Governance
- ➔ Data Validation & Reconciliation
- ➔ Scalable Data Platforms
- ➔ Cloud-Native Data Solutions
- ➔ Backend & Software Engineering

TECHNICAL SKILLS

- ➔ **Programming Languages:** C, C++, Java, Python, SQL
- ➔ **Computer Science Fundamentals:** Data Structures, Algorithm, OOPS, Operating System, System Design
- ➔ **Data Engineering & Workflow Orchestration:** SnapLogic, DataHub (Proprietary Workflow Orchestration Tool), Kafka, PySpark, Airflow
- ➔ **Cloud Platforms & DevOps:** AWS (Lambda, CloudWatch, API Gateway, Redshift Console), GitLab (CI/CD)
- ➔ **Development Tools & IDEs:** VS Code, KIRO, Insomnia, DBeaver
- ➔ **Automation Tools:** Power Automate, N8N

EDUCATION

- **June 2025**
Bachelor of Engineering in Information Science and Engineering
Nitte Meenakshi Institute of Technology, Bengaluru

PERSONAL DETAILS

Date of Birth: 19th June 2003
Languages: English & Hindi
Address: Bengaluru, India

JOB OBJECTIVE

Aspiring Software Engineer with over 1 year of experience in data engineering, aiming opportunities to leverage technical expertise in software development and data management within dynamic IT environments.

PROFILE SUMMARY

- ➔ Associate Software Engineer at Epsilon, delivering innovative data engineering solutions that enhance operational efficiency and drive business value.
- ➔ Architected SQL-driven data validation and Amazon S3-triggered ETL orchestration frameworks, automating reconciliation, reporting, and workflow execution while reducing validation effort by 10+ hours per deployment and enhancing operational reliability.
- ➔ Spearheaded enterprise data engineering initiatives leveraging ETL automation, cloud technologies, and scalable processing architectures.
- ➔ Drove operational excellence through workflow orchestration, platform optimization, and proactive resolution of complex production challenges.
- ➔ Steered data quality governance by implementing validation frameworks, reconciliation controls, and resilient data ingestion strategies.
- ➔ Led modernization programs through configurable, reusable frameworks that enhance scalability, maintainability, and operational efficiency.

WORK EXPERIENCE

Epsilon, Bengaluru | Since February 2025

Growth Path:

Intern (Data Engineer)	February 2025 to August 2025
Associate Software Engineer	Since August 2025

Key Result Areas as Associate Software Engineer:

- ➔ Architecting Amazon S3 trigger-based ETL orchestration framework, automating scheduled workflow and enhancing operational reliability.
- ➔ Establishing configurable monitoring & notification framework identifying ingestion failures, absent files, & delivery confirmations, accelerating incident response and recovery.
- ➔ Managing production support operations with L1/L2 teams, driving root-cause analysis, issue resolution, and recovery of business-critical ETL workflow.

Key Result Areas as Intern (Data Engineer):

- ➔ Developed a configurable field-level filtering framework in SnapLogic, enabling selective column ingestion across client pipelines and improving warehouse detailing.
- ➔ Assisted in designing and maintaining ETL/ELT data pipelines, ensuring accurate, scalable, and efficient data movement workflow.
- ➔ Performed data validation, cleansing, and transformation, enhancing data quality, consistency, and downstream reporting reliability.

Highlights Across Tenure:

- ➔ Spearheaded metadata-driven ETL framework processing 20–30 GB production files, automating ingestion and saving 2+ hours daily.
- ➔ Engineered enterprise-grade SQL validation framework for reconciliation and business-rule verification, reducing validation effort by 10+ hours.
- ➔ Accelerated enterprise data onboarding across various client pipelines, reducing implementation timelines by approx. 20% through framework standardization.
- ➔ Optimized SnapLogic workflow performance through configurable pipeline pool sizing & parallel child pipeline execution, reducing runtime from 2 hours to 40 minutes (67%).

PROJECTS

ThreadBoost | Spring Boot, ThreadPool, REST API | [Github](#)

- ➔ Engineered Spring Boot application leveraging ThreadPool-driven non-blocking architecture, showcasing blocking versus non-blocking processing models.
- ➔ Delivered significant performance gains, reducing read response times, improving CRUD operations by 95.6%, and increasing file I/O efficiency by 85%.

ATM Management System | JAVA, Object-Oriented Programming, File Handling, STL | [Github](#)

- ➔ Developed a modular ATM Management System in Java utilizing inheritance, polymorphism, encapsulation, & abstraction to enhance scalability and maintainability.
- ➔ Steered secure account management, transaction processing, & file-based persistence, enabling reliable customer data storage & transaction history retention across sessions.
