Education

Nitte Meenakshi Institute of Technology, Bengaluru

December 2021 – June 2025

Bachelor of Engineering in Information Science and Engineering

CGPA: 8.68

Technical Skills

Languages: C, C++, Java, SQL, Python

Coursework: Data Structures, Algorithm, OOPS, Operating System, System Design

Data Engineering and ETL: SnapLogic, DataHub (Proprietary Workflow Orchestration Tool), PySpark, Airflow

Cloud/Infra: AWS (Lambda, CloudWatch, API Gateway, Redshift Console), GitLab (CI/CD)

Developer Tools: VS Code, KIRO, Insomnia, DBeaver, Power Automate, N8N

Work Experience

Epsilon

August 2025 – Present

Associate Data Engineer

- Designed and implemented a metadata-driven **ETL** framework to **process 20–30 GB** production files by automatically partitioning them into configurable chunks while preserving headers. **Leveraged SQL, Amazon S3, staging tables, and SnapLogic** to automate ingestion, reducing manual processing time by **2+ hours daily**.
- Built an automated **SQL-based** data validation framework to verify record counts, null checks, business rules, and reconciliation across ingestion and extraction pipelines. Generated Excel reports and email summaries, reducing manual validation effort by **10+ hours per deployment**.
- Designed an automated orchestration framework that generated **trigger files in Amazon S3** to initiate **daily, weekly, and monthly ETL workflows**, eliminating manual executions and improving operational reliability.
- Developed a configurable monitoring and notification framework that detects **ingestion failures, missing files, and successful deliveries**, enabling faster incident response and workflow recovery.
- Participated in **on-call production support**, collaborating with **L1/L2 teams** to investigate ETL failures, **validate upstream file deliveries, analyze pipeline and SQL logs**, perform root cause analysis, and ensure timely recovery of business-critical workflows.

Epsilon

February 2025 – August 2025

Data Engineer Intern

- Developed a **configurable field-level filtering** framework in **SnapLogic** that enabled selective ingestion of required columns across multiple client file pipelines, reducing unnecessary data processing and improving warehouse detailing.
- Optimized a **SnapLogic** workflow by parallelizing child pipeline execution using configurable pipeline pool sizing, reducing end-to-end execution time from **2 hours to 40 minutes** (67% improvement).

Projects

ThreadBoost

Spring Boot, ThreadPool, REST API | [GitHub](#)

- Created a **Spring Boot** application to illustrate the effectiveness of **non-blocking architecture** using a **ThreadPool**, showcasing the differences between blocking and non-blocking architectures.
- Achieved notable performance enhancements: read operations saw a reduction in response time, CRUD operations experienced a **95.6%** improvement, and file read/write operations showed an **85%** increase in efficiency.

ATM Management System

JAVA, Object-Oriented Programming, File Handling, STL | [GitHub](#)

- Built a modular ATM Management System in **Java** using **Object-Oriented Programming** concepts including inheritance, polymorphism, encapsulation, and abstraction to ensure maintainability and scalability.
- Implemented secure account management, transaction processing, and file-based persistence to support customer data storage and transaction history across application sessions.

Coding Profiles

- 3 (1608 rating)** coder on CodeChef (Profile), **Newbie (1116 rating)** on Codeforces (Profile)
- Global Rank **57** in CodeChef December Long (Div3), Rank **771** in Starters 65 (Div3)
- Solved 500+ questions on platforms: **Codeforces, CodeChef, HackerRank, and GeeksforGeeks**
